

Shared Services of the Portuguese Ministry of Health

“ eHealth Hub is a project that, for projects that intend to build up on experiences and to provide state of the art developments in eHealth, I think needs to be maintained and proliferated. ”

SPMS

Samuel Jacinto, Project Manager

Portugal

My challenges

- I was finding it difficult to search projects in healthcare that had specific subjects. For instance people empowerment or digitalization in healthcare.
- It was very time-consuming using web search for that purpose.

eHealth HUB support

eHealth HUB Platform.

eHealth HUB platform was tremendously helpful to identify the specific healthcare technology.

The platform helped me find some examples on the subject I wanted. It was very easy to use the filters and I managed to extract some knowledge from other projects.

I use such knowledge in my current work which consists of managing and monitoring the Technology and Health projects in accordance to the methodologies and goals for healthcare digitalization.

The company

SPMS was created with the mission of providing shared services - in the areas of procurement and logistics, financial services, human resources and information and communication systems and technologies - to entities with specific activity in the health area, in order to “centralize, optimize and rationalize” the acquisition of goods and services in the Portuguese National Health Service.

eHealth HUB *Stories*

Learning points ●

“Fantastic tool for solutions scouting. Sometimes it is not so easy for us to know what’s in the market.”

Samuel Jacinto, Project Manager at SPMS

eHealth HUB services

eHealth HUB platform

The eHealth HUB platform (platform.ehealth-hub.eu) is the map of European digital health. An online catalogue that identifies the key players to enhance transparency in the sector and encourage stakeholders' interaction
