

Hospital Bambino Gesù: in the search of monitoring solutions for paediatrics

“ Our experience with eHealth HUB was instrumental to demonstrate to clinicians and researchers the possibility of developing solutions together with startups starting from clinical and patient needs and choosing from a large number of solutions. ”

My challenges

- Poor knowledge about innovation and the management of innovation
- Show to clinicians and researchers that innovation is a method
- Launch a challenge addressing clinical routine issues
- Not used to set up large challenges across the hospital

eHealth HUB support

Solution Match [June 2018 – May 2019]. “eHH helped the most with a method suitable for the hospital case, with the capability to identify a high number of candidates and solutions tailored to all our needs and requirements.

The scouting and qualification of the startups definitively helped with selecting the right candidates to start negotiating with. By the end of the process, the hospital was ready to start a collaboration with two companies both short and long term and develop a cocreated prototype with one of them immediately in the following months of the service delivery ”.

The company

The Bambino Gesù Children’s Hospital is the largest paediatric hospital in Europe and integrates research and clinical activities. The hospital participates in several international research networks. With a staff of almost 2,600 including physicians, researchers, nurses, clinical technicians and office staff, the hospital treats and cares for a large number of children and adolescents from all over the world. More than 2.000.000 healthcare services are provided each year.

eHealth HUB *Stories*

Learning points ●

“Thanks to the Solution Match service, the hospital staff became more familiar with startups business models and how to integrate it into the business model of the hospital, bridging clinical needs with technical requirements useful for the work of startups. On their side, the startups got the opportunity to discuss with real healthcare professionals to adapt and improve their solution based on clinical needs.”

Pr Alberto Tozzi, Chief Innovation Officer Hospital Bambino Gesù

eHealth HUB services

Solution Match

A personalized service for healthcare providers, insurers, pharma or medtech companies looking for a concrete digital health solution to be implemented in their organization. Solution Match helps to clarify their needs and requirements, research available solutions and pre-select the best matches.

The project has received funding from the European Union's Horizon 2020 Research and Innovation Programme under Grant **Agreement No727683**.
