

## Medimaat

“ We received advice on the legal implications of our way of working: which regulations apply to us and liability. Additionally, we received advice on data protection: data that can be used on our platform. ”

Medimaat

Philip Croon, Managing partner

Netherlands

### My challenges

- Understanding data protection laws
- Understanding medical liability regulation
- Limited resources to devote to consultancy services

### eHealth HUB support

#### Legal guidance.

“Clinic's free legal advice service has taught me the importance of legal compliance.

As a startup founder, you are hesitant to involve lawyers because your focus is on the product and cash is limited. What often happens is that entrepreneurs start drawing up the legal documents themselves on the basis of (free) formats on the internet. These can be incomplete and contain errors, which ultimately costs more time and money to fix than previously thought.

A good legal basis is extremely important. It can bring many benefits in the future and prevent many problems.“

### The company

Medimaat is about empowering patients. Medimaat connects medical students to patients and helps them before, during and after visiting a doctor.

# eHealth HUB *Stories*

## Learning points ●

*“The memo they provided is a solid base to further evaluate the legal issues of MediMaat. It is both professional yet easy to read and understand, which is important for me since my knowledge of law is poor. I know I gave them a hard case but they did an excellent job.”*
